

# HANNAH ANDERSON

Project and Quality Manager

In her position as a Modality Solutions' Project and Quality Manager, Hannah Anderson serves as one of the specialized project consultants for the cold chain management firm. Hannah assists a Modality Solutions' pharmaceutical client with onsite program management of its thermal package engineering services.

She implements and monitors communication plans for every project to make sure outside vendors and internal customers are meeting all filing requirements and deadlines. She develops thermal packaging qualification Value Stream Maps (VSMs) to identify areas of improvement in process and project communications. Her responsibilities also include initiating change controls, NCs (Non-conformances) and CAPAs (Corrective and Preventive Actions). Hannah is responsible for the technical justification of thermal packaging to meet specific product requirements and design, verify and qualification activities when new thermal packaging is required.

Prior to joining Modality Solutions, Hannah was a thermal packaging engineer with Amgen. She performed all project management duties for the department. She was responsible for tracking the department's budget and developed implementation plans for all projects. In addition, she delivered and presented thermal packaging monthly reports to executive management. Hannah also launched and maintained the thermal engineering department's website. This website allowed engineers, regulatory affairs, and quality assurance to review technical documentation and qualification reports for all thermal packaging.

Hannah attended University of Wisconsin - River Falls where she received her B.S. degree with Biomedical Sciences emphasis with a Biology and Chemistry minor. Upon completion of her degree, Hannah held a variety of chemist and laboratory technician positions prior to joining Amgen.

## Work Experience

Amgen

Medea Labs

National Genetics Institute

Psychomedics Corporation
