

SAMUEL CLOUGHLEY

Consulting Engineer

Samuel Cloughley is a Consulting Engineer at Modality Solutions, where he specializes in cold chain packaging and distribution packaging testing. He works on cold chain packaging design and testing, including evaluating new sustainable materials for use in the cold chain environment, and supports the development of operational qualification reports for clients.

Sam's work also extends to testing on protective packaging for distribution, drawing on a background that spans both the thermal and structural sides of packaging. This combination allows him to identify where a client's existing packaging design is falling short and to move projects toward resolution efficiently.

Sam holds a degree in Packaging Engineering from California Polytechnic State University, San Luis Obispo. He gained early experience through an internship in packaging structural design, and most recently worked at Veritiv Landsberg as a packaging test engineer, focusing on cold chain testing and design. Outside of work, Sam, a California native, spends his time surfing, playing golf, and pursuing outdoor activities.
